

Take-home Case: Go China Campaign AI Workflow Prototype

AI Marketing Engineer Candidate Brief

Purpose of this case

This take-home case tests whether the candidate can understand destination campaign operations, abstract reusable workflow logic from semi-structured campaign data, and design a practical AI solution that improves campaign ops efficiency while keeping humans as final decision-makers.

1. Case Background

Our team owns global destination campaign operations for Trip.com, including campaign IPs such as Go Series and Monthly Super Destination.

For this take-home case, please use Go China as the campaign scenario. Go China is a destination campaign designed to promote China as a travel destination across selected international markets. The campaign may include flights, hotels, attractions & tickets, tours, trains, airport transfers, and localized destination content.

Campaign ops currently need to coordinate many inputs manually, including market priorities, destination focus, product readiness, traffic resources, CRM strategy, campaign page structure, creative assets, localization, tracking, and launch risks.

We would like to explore how AI can help campaign ops turn fragmented campaign inputs into a structured, reusable workflow.

2. Candidate Task

Please design and build a prototype, AI skill, or AI-powered workflow solution for the Go China destination campaign workflow.

Your solution should help campaign ops transform raw campaign inputs and data tables into actionable outputs, such as:

- Campaign strategy brief
- Market prioritization logic
- Campaign page structure
- Product and sourcing recommendations
- CRM / push audience and message strategy
- Creative asset request brief
- Localization checklist
- Launch checklist
- Risk and dependency summary

The prototype does not need to be production-ready, but it should clearly demonstrate how AI can improve the campaign ops workflow.

Important

We are especially interested in how you abstract reusable workflow logic from the provided data and dimensions.

3. Core Requirement: Abstraction Ability

Please show how your solution handles different dimensions in a reusable way, including:

- Different markets
- Different destination cities and city clusters
- Different product lines
- Different campaign page modules
- Different traffic channels
- Different creative asset requirements
- Different stakeholder constraints
- Missing, incomplete, or conflicting data

A strong solution should not be hardcoded only for Go China. It should show how the same logic could later be reused for Go Japan, Go Thailand, Monthly Super Destination, or other destination campaigns.

4. Suggested Prototype Directions

You may choose one of the following directions, or combine more than one if manageable.

Option A: Go China Campaign Strategy Copilot

- Turns appendix data into a structured campaign strategy brief.
- Expected outputs: campaign objective, target market prioritization, destination positioning, city cluster strategy, product focus by market, recommended campaign hooks, traffic and CRM strategy, risks and dependencies.

Option B: Campaign Page & Asset Brief Generator

- Converts Go China campaign inputs into a campaign page plan and creative asset request.
- Expected outputs: page module structure, module priority logic, user journey flow, product listing logic, creative asset list, localization notes, UED / design request brief, launch checklist.

Option C: CRM / Push Audience & Message Planner

- Recommends audience targeting and message angles for Go China.
- Expected outputs: audience segmentation logic, destination intent logic, ringfencing logic, message angles by market / segment, push / EDM copy examples, frequency and suppression considerations, audience overlap risks.

Option D: End-to-end Campaign Ops Workflow Skill

- Connects strategy, page planning, CRM planning, asset briefing, localization, and launch checklist into one workflow.
- Expected outputs: input template, workflow steps, AI-generated campaign brief, AI-generated page structure, AI-generated CRM plan, AI-generated asset brief, human review checkpoints, scalable data schema.

5. Required Deliverables

5.1 Working Prototype or Demo

This can be built with any tool, for example:

- GPT / Claude skill
- Streamlit app
- Python script
- Prompt chain
- Notion / Google Sheet + AI workflow
- Figma prototype
- Low-code automation
- Internal tool mockup

The prototype should show how the candidate uses the appendix data as input and generates structured campaign outputs.

5.2 Short Explanation Document or Slides

Please provide around 5-8 slides or a short document covering:

- Which workflow problem you chose
- Why this problem matters for campaign ops
- How your AI workflow works
- Input data schema
- Output structure
- Prompt / agent / workflow design
- Human review points
- Risks and limitations
- How this could scale to other destination campaigns

5.3 Sample Output

Please provide at least one realistic output generated by your prototype, such as:

- Go China campaign strategy brief
- Campaign page structure
- CRM audience plan
- Push copy examples
- Creative asset request brief
- Launch checklist
- Risk summary

5.4 Source Material

Please include:

- Prompts used
- Data schema or input template
- Code or workflow logic, if applicable
- Assumptions made
- How you handled missing or conflicting information

6. Candidate Instructions for Using the Appendix

The appendix data is fictional and simplified for the purpose of this case. Please use it as input for your prototype. You are expected to identify useful dimensions, abstract the logic, and decide what should be used directly, transformed, ignored, or flagged for human review.

Candidates should be able to:

1. Identify the key dimensions from the appendix data.
2. Design a reusable data schema or input template.
3. Decide which inputs should drive campaign strategy, page structure, CRM logic, and asset requirements.
4. Build a prototype that turns the appendix data into structured campaign outputs.
5. Clearly separate facts from provided data, assumptions, AI-generated recommendations, and items requiring human confirmation.

Example of good abstraction

A strong candidate may abstract the workflow as: Market x City / City Cluster x Product x Channel x Asset x Stakeholder Constraint.

7. Submission Format

- Prototype or demo link / file
- 5-8 slides or a short explanation document
- Sample generated output
- Prompt, schema, code, or workflow logic

Appendix: Go China Campaign Data Tables

The following fictional and simplified data tables should be used as input material for the prototype. Candidates are expected to identify useful dimensions, abstract reusable workflow logic, and decide what should be used directly, transformed, ignored, or flagged for human review.

Appendix A: Campaign Basic Information

Field	Information
Campaign Name	Go China Round 7
Campaign Type	Destination campaign / Go Series
Campaign Objective	Drive China destination awareness, campaign traffic, and travel product conversion across selected international markets
Campaign Duration	4 weeks
Target Markets	Hong Kong, South Korea, Singapore, Malaysia, Thailand
Destination Scope	Mainland China
Key City Focus	Shanghai, Beijing, Guangzhou, Shenzhen, Chengdu, Chongqing, Hangzhou, Suzhou, Xi'an, Zhangjiajie
Product Scope	Hotels, Flights, Attractions & Tickets, Tours, Trains, Airport Transfers
Main Challenge	China has strong travel appeal, but market demand, transport familiarity, city preference, and product conversion differ by market
Human Decision Maker	Campaign Ops Project Manager
Cross-functional Teams	Regional teams, Sourcing teams, CRM team, Content Center

Appendix B: Market Demand Signals

Market	China Search UV Index	Search Growth vs Baseline	Booking Lead Time	Top City Interest Signals	Main User Barrier	Localization Need
Hong Kong	95	+18%	7-14 days	Shenzhen, Guangzhou, Shanghai, Beijing	Users are familiar with China but need fresh reasons to travel	Traditional Chinese; weekend / short-trip angle
Korea	78	+12%	14-30 days	Shanghai, Beijing, Zhangjiajie, Chengdu	Lower familiarity with local transport and China travel planning	Korean; itinerary and package guidance
Singapore	72	+9%	21-45 days	Shanghai, Beijing, Chengdu, Hangzhou	Users need confidence on payment, and itinerary planning	English; premium city-break and family angle
Malaysia	69	+15%	21-45 days	Guangzhou, Shanghai, Beijing, Xi'an	Price sensitivity and flight deal dependency	English / Malay optional; value and family angle
Thailand	64	+6%	14-30 days	Shanghai, Chongqing, Chengdu, Guangzhou	Destination awareness beyond top cities is limited	Thai; visual inspiration and easy itinerary angle

Appendix C: Product Performance by Market

Market	Flight Demand	Hotel Conversion	Attractions & Tickets Interest	Tours Interest	Train / Transfer Interest	Suggested Product Tension
Hong Kong	High	Medium	Medium	Low	High	Strong short-trip potential, but hotel upsell needs stronger city-stay hook
Korea	Medium	Medium	High	High	Medium	Users may need bundled itinerary guidance to convert beyond flights
Singapore	Medium	Low-Medium	High	Medium	Medium	Good inspiration demand, but hotel conversion needs stronger trust and premium supply
Malaysia	Medium	Medium	Medium	Medium	Low-Medium	Price-sensitive users need clear deal mechanics and flight + hotel value
Thailand	Low-Medium	Low	Medium	High	Low	Needs destination education and visual content before conversion push

Appendix D: Destination City & Product Readiness

City / Cluster	Destination Role	Hotel Supply Readiness	Flight Route Readiness	Attractions / Tours Readiness	Train / Transfer Readiness	Campaign Risk
Shanghai	Gateway city / urban lifestyle	High	High	High	Medium	Too generic if no fresh campaign angle
Beijing	Culture and history anchor	High	Medium	High	Medium	Needs strong storytelling, not only product listing
Guangzhou / Shenzhen	Short-trip / GBA extension	Medium	High	Medium	High	Strong for HK, less relevant for SEA markets
Chengdu / Chongqing	Food, lifestyle, young travelers	Medium	Medium	Medium	Medium	Attractive content angle, but product depth may vary
Hangzhou / Suzhou	Premium short-stay / scenic city	Medium	Medium	Medium	High	Works better as add-on from Shanghai
Xi'an	Culture and heritage	Medium	Low-Medium	High	Medium	Needs itinerary education
Zhangjiajie	Nature / scenic destination	Low-Medium	Low-Medium	High	Low	High inspiration value, but harder independent travel planning

Appendix E: Historical Traffic Channel Performance

Channel	Market Coverage	Estimated Reach	CTR Index	Conversion Quality	Resource Owner	Notes
Trip.com App Homepage Banner	All markets	High	High	Medium	Regional Teams	Strong traffic driver, but needs clear destination hook
Trip.com App Hotel Homepage Banner	All markets	Medium	Medium	Medium-High	Hotel Sourcing Team	Better for users already in shopping mindset
Trip.com App Flight Homepage Banner	All markets	Medium	Medium	Medium	Flight Sourcing Team	Good for destination demand capture
App Push	Selected markets	Medium	High	Medium	CRM Team	Needs strong segmentation and frequency control
EDM	HK, SG, MY	Medium	Medium	Medium	CRM Team	Better for explanation-heavy messaging
Content Channel	KR, TH, SG	Low-Medium	Medium	High	Content Center	Strong for destination education, but resource capacity is limited
Social Post	Selected markets	Low	Medium	Low-Medium	Regional Teams	Useful for awareness, not always direct conversion

Appendix F: Previous Go China Page Module Performance

Module	Description	CTR Index	Conversion Contribution	Design Complexity	Candidate Should Consider
Hero KV	Main campaign visual and top CTA	High	Medium	High	Needs strong destination positioning and localized copy
Top City Deals	Product cards by city	Medium	High	Medium	Should be prioritized for conversion-focused users
Themed Cities	Culture, food, nature, citywalk, family	Medium	Medium	Medium-High	Good for inspiration and user education
Flight Deals	Flight routes to China	Medium	Medium	Low-Medium	Important for price-sensitive markets
Hotel Brand / Resort Module	Featured hotel groups or partner offers	Low-Medium	Medium	Medium	Useful if sourcing has strong KA supply
Attractions & Tickets	Tickets, tours, theme parks, landmarks	Medium	Medium	Medium	Strong for Korea / Singapore / Thailand
Travel Guide / Content	Itinerary, transport, payment, visa tips	Low-Medium	Indirect	Low	Helps reduce travel friction
Partner Promotion Banners	KA-funded placements or dedicated offers	Low	Case by case	Medium	Should not disrupt main user journey

Appendix G: Creative Asset Requirements

Asset Type	Usage	Required Markets	Localization Level	Priority	Notes
Main KV	Campaign page hero section	All markets	High	P0	Needs localized headline and CTA
Homepage Banner	App / H5 / Online entry	All markets	Medium	P0	Must communicate Go China clearly in limited space
City Module Image	Themed city sections	All markets	Medium	P1	Can reuse base image with localized text
CRM Header	EDM / push landing visual	HK, SG, MY	High	P1	Needs market-specific message angle
Content Cover Image	Travel guide / inspiration content	KR, TH, SG	Medium	P2	Useful for education-focused channels
Partner Banner	KA / hotel group exposure	TBD	Medium	P2	Only needed if partner supply is confirmed
Inline Promo Banner	Product module divider	All markets	Low-Medium	P2	Lower design priority

Appendix H: Stakeholder Inputs and Constraints

Stakeholder	Input / Requirement	Impact on AI Workflow
Regional Teams	Want flexibility to localize city focus and copy angle	AI should allow market-level overrides
Sourcing Team	Product supply may not be equally strong across all cities	AI should flag supply gaps and avoid over-promising
CRM Team	Push frequency is limited and audience overlap needs control	AI should recommend segmentation and suppression logic
UED / Design	Creative resources are limited	AI should prioritize P0 / P1 assets and avoid unnecessary requests
Content Center	Content resources are limited and market-tailored content requires dedicated effort	AI should recommend where content is truly needed
